Principal risks and uncertainties facing the Company during the period under review

In its ordinary course of business, the Company may be exposed to various financial risks, the most important of which are foreign exchange risk, credit risk and liquidity risk.

The risk management of the Company is currently carried out under the direct supervision of the Executive Director and the financial experts under the policy, established by the Board of Directors, who developed the basic principles of general management of financial risk, based on which are developed specific (written) procedures for managing the individual specific risks, such as currency, price, interest rate, credit and liquidity, and the use of non-derivative instruments.

The following describes the different types of risks the Company faces in the course of its business operations and the approach for managing those risks.

Impact of the Global Economic Crisis

Currently, the macroeconomic environment in Bulgaria faces the negative impact of the global financial and economic crisis and its results continue to be strongly felt. The measures taken by the EU and the Bulgarian Government destroyed to some extent, the negative phenomena in the economy.

Sector Risk

The construction sector suffered most severely and continuously by the negative impact of the global economic crisis, which resulted in the following trends:

- Shrinking of the construction market;
- Termination of contracts already signed;
- Freezing of construction works of already started contracts;
- Stronger competition in all market segments;
- Lowering prices to dumped levels.

Measures that the Company intends to undertake to reduce the impact of the global financial crisis, given the increase of global credit risk, liquidity stagnation and collapse of capital flows:

- strict compliance with the contracts concluded with financial institutions to exclude the possibility to early payment requests;
- limited investments in projects outside the main focus of the Company;
- cost optimization and investment program review;
- speeding up the collection of receivables as well as their categorization for risk assessment and finding effective tolls for collection;
- insurance of the financial risks for significant receivables;
- establishment of relationships with affluent investors only (such as government institutions, municipalities, companies working on projects secured by government guarantees);
- if long-term receivables occur, searching for a form of their restructuring into long-term debt and securing them with appropriate assets;
- with regard to the implementation of certain energy projects and energy-efficient operations, searching for options for EU- and other financing programs.

Currency Risk

The Company carries out its activities primarily on the domestic market, whereas the contracts abroad are in Euro. Therefore, Enemona AD is not exposed to significant currency risk because almost all of its operations and transactions are denominated in Bulgarian lev (BGN) and Euro (EUR).

The company has introduced a system for planning of imported deliveries and future payments in order to control the currency risk.

Credit Risk

When carrying out its activities the Company is exposed to credit risk that is the risk associated with some of its Contractors which will not be able to comply fully and in time with their payments.

The Company's financial assets are concentrated in two groups: cash and receivables from customers.

The Company's cash and payment operations are carried out by the following banks - DSK, Eurobank EFG, UBB, Unicredit Bulbank, etc., which have a high reputation and strong liquidity, that limits the risk on cash and cash equivalents.

The Company has no significant concentration of credit risk. Its policy is that payments are made within the terms specified in the contracts for the execution of construction and assembly works. The collection and concentration of receivables is monitored currently, according to the established policy of the Company. For that purpose, a daily review is made by the financial and accounting department to monitor by clients and by received payments, followed by an analysis of the unpaid amount and the condition of the client.

To control the risk, the Company ensures immediate payment of collect receivables and the long-term ones are formed into individual agreements with debtors.

Measures that companies from the Enemona Group has introduced in order to control the collection of receivables:

- A detailed estimation for the expected revenues from receivables and uncollected receivables is made. A daily forecast for the next two months is made. A separate forecast is made on a monthly basis for the whole year. The implementation of the underlying assumptions are monitored by the Executive Director and the Financial Department of the Group;
- Every week, in some cases even more frequently, meetings are held by the Financial Committee to the Board of Directors, to discuss problems with uncollected receivables. A person responsible for each overdue receivable is determined, who is responsible for communicating with the company, sending notifications, if necessary bringing legal proceedings and making a plan to influence the payers. The meetings are attended by the Chief Executive Officer of Enemona AD;
- A model is developed that tracks receivables and cash flows. It is available to all offices and subsidiaries of the company and is constantly updated;
- When negotiating for a business deal with a new contractor, investigations are made for the financial reliability according to a procedure (assessment of the financial risk by Coface Group (a leading company in the field of financial management) and the Bulgarian Export Insurance Agency (BAEZ);
- Certain receivables are insured - "Financial Risk Insurance";
- The contracts with partners include provisions that ensure the collectability of receivables (indisputability, irrevocability, default interest, valid date, etc.)
- An age analysis of receivables is prepared and when unacceptable delay occurs, measures for their collecting are taken (reminders, calls for repayment notary and legal action).

Liquidity Risk

The liquidity risk is the adverse situation of the company not to be able to meet unconditionally all its obligations according to their maturity.

The Company observes a conservative policy on liquidity management, maintaining constant optimal liquid cash and a good ability to finance its business. Enemona AD uses bank and other loans as well.

Enemona manages liquidity of assets and liabilities by a detailed analysis of the structure and dynamics and forecasting of future cash flows.

Other information

On 07 January 2015, Enemona AD publicly disclosed information for the sale-trade of 150 000 shares with a nominal value of BGN 1.00 each, representing 3.37% of the capital of "Energetics and Energy Savings Fund - EESF SPV".
